

Comprehensive Pizza Sales Business Analysis Report

This report brings together key findings from the pizza sales dashboard and in-depth SQL analysis. It's designed to give you a full picture of how the business is performing, what customers are buying, and where the best opportunities lie for growth. Let's dive in!

1. Key Performance Indicators (KPIs)

Here's a quick snapshot of the business metrics:

- **Total Revenue:** 817,860
- **Total Orders:** 21,350
- **Total Pizzas Sold:** 49,574
- **Average Order Value:** 38.31
- **Average Pizzas Per Order:** 2.32

These numbers show a solid sales volume and a healthy average order size, which suggests there's room to encourage customers to order even more, perhaps through bundled offers or targeted promotions.

2. Sales Patterns & Trends

A. Monthly and Daily Sales

Sales really pick up in **January and July**—likely thanks to holidays, events, or successful seasonal promotions. In contrast, September and October see a bit of a dip, so these might be good months to introduce special deals.

Looking at the days of the week, **Fridays and Saturdays** are the busiest. These are the best times to run special campaigns or ensure extra staff are scheduled.

B. Hourly Trends

Most orders are placed between **12PM and 1PM**, making lunch hours a key window for business. Evenings also see a steady flow, but lunch definitely takes the prize.

3. Product Performance Analysis

A. Pizza Sizes

- **Large pizzas** are the most popular and bring in the most revenue.
- **Medium and regular sizes** are also in demand, but not as much as large.
- **X-Large and XX-Large** serve a more niche market.

B. Pizza Categories

- The **Classic** range leads the charge, both in revenue and sheer number of pizzas sold.
- **Chicken pizzas** are also strong sellers, especially in the large size.
- **Supreme and Veggie** varieties do moderately well, with room to grow.

C. Best and Worst Sellers

The **Thai Chicken Pizza** is the top earner, while the **Classic Deluxe** wins for most orders and quantity sold. On the flip side, the **Brie Caree Pizza** isn't connecting with customers—it might need a fresh approach or possibly be dropped from the menu.

4. Customer Behavior Insights

- **Small orders (1–2 pizzas)** make up about 67% of all orders, so most customers are buying for themselves or a small group.
- **Medium orders (3–5 pizzas)** and **large orders (6 or more)** are less common, but there's definitely potential to grow these segments through family or group deals.

Interestingly, sales by pizza type are steady throughout the week, but overall volumes spike on weekends. This supports the case for stocking up and staffing up for Friday and Saturday rushes.

5. Recommendations to Grow Sales

1. Take Advantage of Peak Times

- Offer special lunch combos and quick meal deals between 11AM and 2PM.
- Introduce weekend-only bundles like family packs or party pizzas.

2. Double Down on Best Sellers

- Highlight Classic and large Chicken pizzas on the menu and in promotions.
- Consider retiring or reworking underperforming pizzas. If a pizza isn't selling, it might be time to try something new—maybe a different flavor or a monthly special.

3. Boost Order Value

- Launch a loyalty program to reward frequent buyers, especially those who place larger orders.
- Promote group deals to encourage small-order customers to add more items.

4. Menu Improvements

- Keep your best sellers visible and tempting, both online and in-store.
- Give lesser-known or new pizzas a limited-time spotlight to encourage customers to try them out.

5. Operational Tweaks

- Schedule more staff during lunch and dinner peaks, especially on Fridays and Saturdays.
- Make sure your inventory matches demand—stock up on the most popular ingredients and sizes.

6. Better Marketing

- Aim online ads at peak times and push out deals in advance of the weekend.
- Collect and act on customer feedback, particularly for pizzas that aren't selling well.

6. Look Ahead: Opportunities and Ideas

- **Understand Your Customers:** Try to gather more data about who's buying—age, location, preferences—to tailor future offerings.
- **Channel Focus:** Find out how much business comes from dine-in, delivery, and takeaway to fine-tune marketing efforts.

- **Customer Satisfaction:** Simple post-order surveys can help pinpoint what keeps people coming back.
-

7. Growth Potential

- **New Flavors or Bundles:** Build on the success of classic and chicken pizzas by experimenting with new recipes or value bundles.
 - **Corporate Deals:** Lunch is hot—consider reaching out to offices or colleges for corporate catering deals.
 - **Subscriptions:** Offer meal plans or pizza subscriptions for steady revenue.
-

8. Managing Risks

- Don't let sales rely too heavily on Friday and Saturday—try to boost slow days with “midweek madness” specials.
 - Monitor whether introducing new products hurts the sales of old favorites; adjust as needed to avoid “cannibalizing” your top performers.
-

Conclusion

Overall, the business is on solid ground, with strong brand loyalty and several runaway best sellers. There's ample room to grow by fine-tuning your menu, running targeted promotions, and making sure your operations line up with sales peaks. With ongoing innovation, smart marketing, and a focus on what your customers love most, you're well positioned to boost sales, profits, and satisfaction in the months ahead.
